### Computational Fluid Mechanics Heat Transfer

"Computational Fluid Mechanics and Heat Transfer is very well written to be used as a textbook for an introductory computational fluid dynamics course, especially for those who want to study computational aerodynamics. Most widely used finite difference and finite volume schemes for various partial differential equations of fluid dynamics and heat transfer are presented in such a way that anyone can read and understand them rather easily.

Fluid mechanics and heat transfer are key to the understanding and improvement of mechanical systems. A more fundamental and insightful understanding of turbulence (the nonlinear and apparently chaotic motion of fluids and thermal fields) remains one of the great challenges of all engineering and science. The apparently structural patterns that appear in nature and designed systems has led to the creation of the construal law a member of this group, Adrian Bejan, and his collaborators.
