## **and Inequalities ...**

One obvious difference between linear equations and inequalities is the solution set. A linear equation of two variables can have more than one solution. For instance, with  $x = 2y + 3$ , (5, 1), then (3, 0) and (1, -1) are all solutions to the equation. In each pair,  $x$  is the first value and  $y$  is the second value.
