Dry Lab Experiments A dry lab is a laboratory where computational or applied mathematical analyses are done on a computer-generated model to simulate a phenomenon in the physical realm. Examples of such phenomena include a molecule changing quantum states, the event horizon of a black hole or anything that otherwise might be impossible or too dangerous to observe under normal laboratory conditions.

Laboratory Experiments for Non-Major and General Chemistry Courses. The American Chemical Society has stated: "To learn chemistry, students must directly manipulate chemicals, study their properties and reactions, and use laboratory equipment and modern laboratory instruments." and "This hands-on experience is necessary for students to understand, appreciate, and apply chemical concepts."

1. You are required to wear approved eye protection in the laboratory whenever you are doing any experiment or whenever any experiment is being done in the laboratory around you (eye protection must meet ANSI Z87.1 impact standards). Repeated failure to wear approved eye protection will result in dismissal from the experiment being conducted. 2.
