Body Organization and Homeostasis Flashcards | Quizlet

Organization of the body. The cell is the basic living unit of the human body—indeed, of all organisms. The human body consists of trillions of cells, each capable of growth, metabolism, response to stimuli, and, with some exceptions, reproduction. Although there are some 200 different types of cells in the body, these can be grouped into ...

human body | Description, Anatomy, & Facts | Britannica

Anatomy and physiology are concerned with the level of the individual body, what scientists call the organism. However, you can't merely focus on the whole and ignore the role of the parts. The life processes of the organism are built and maintained at several physical levels, which biologists call levels of organization: the cellular level, [...]
