The use of computing tools in the modeling and simulation of PTSC systems has also been utilized extensively and has made analysis and performance optimization of these systems possible. Moreover, unlike experimental studies, modeling does not include uncertainty - but necessarily has simplifications/assumptions - and provides wealth of information for the task considered.

The performance analysis of the PV array configurations is carried out by considering the maximum power generated (P M P), open-circuit voltage (V O C), voltage at maximum power point (V M P P), short-circuit current (I S C), current at maximum power point (I M P P), mismatching power loss (Δ P L) and fill factor (FF). The simulation and performance analysis of PV array configurations is performed with 25 PV modules of KYOCERA-KC200GT modules.

Building performance simulation is the replication of aspects of building performance using a computer-based, mathematical model created on the basis of fundamental physical principles and sound engineering practice. The objective of building performance simulation is the quantification of aspects of building performance which are relevant to the design, construction, operation and control of buildings. Building performance simulation has various sub-domains; most prominent are thermal simulatio

Building performance simulation - Wikipedia
A simulation is an approximate imitation of the operation of a process or system that represents its operation over time. Simulation is used in many contexts, such as simulation of technology for performance tuning or optimizing, safety engineering, testing, training, education, and video games.Often, computer experiments are used to study simulation models.

In Simulink, three modes affect simulation performance: Normal, Accelerator, and Rapid Accelerator (Figure 1). As their names imply, Accelerator is faster than Normal, and Rapid Accelerator is faster still. Each increase in speed typically means sacrificing another capability—for example, flexibility, interactivity, or diagnostics.
