CSH (C SHell) - The C shell's syntax and usage are very similar to the C programming language.
KSH (Korn SHell) - The Korn Shell also was the base for the POSIX Shell standard specifications etc.

Introduction to Linux Shell and Shell Scripting ...

A shell is a special user program which provides an interface to the user to use operating system services. Shell accept human readable commands from the user and convert them into something which kernel can understand. It is a command language interpreter that execute commands read from input devices such as keyboards or from files.

Basic Shell Commands in Linux - GeeksforGeeks

Traditionally, the Bourne shell program name is sh and its path in the Unix file system hierarchy is /bin/sh. But a number of compatible work-alikes are also available with various improvements and additional features.

Unix shell - Wikipedia

Bourne Shell supports the following relational operators that are specific to numeric values. These operators do not work for string values unless their value is numeric. For example, following operators will work to check a relation between 10 and 20 as well as in between "10" and "20" but not in between "ten" and "twenty".

Unix / Linux - Shell Basic Operators - Tutorialspoint

Shell Scripting Tutorial. This tutorial is written to help people understand some of the basics of shell script programming (aka shell scripting), and hopefully to introduce some of the possibilities of simple but powerful programming available under the Bourne shell. As such, it has been written as a basis for one-on-one or group tutorials and exercises, and as a reference for subsequent use.

The Shell Scripting Tutorial

Introduction to Unix Shell Scripting: In Unix, the Command Shell is the native command interpreter.

In this tutorial we will learn about Arithmetic Operators in Shell Programming. We will be covering the following math operations in this tutorial. Addition + Subtraction - Multiplication * Division / Modulus % to get remainder; expr command. In shell script all variables hold string value even if they are numbers.

Shell Programming - Arithmetic Operators - Unix ...

A shell parses commands entered by the user and executes this. To be able to do this, the workflow of the shell will look like this: Startup the shell; Wait for user input; Parse user input; Execute the command and return the result; Go back to 2. There is one important piece to all of this though: processes. The shell is the parent process.
